C. I- FUNCTION: First step of the lipid cycle reactions in the
Diosynthesis of the cell wall peptidoglycan (By similarity).
C. I- ALALYTIC ACTIVITY: UDPMUTZAC (0yl-L-Ala-gamma-D-Glu-L-Lyse-D-Ala-D-Ala) - diphosphate = UMP + MurzAc (0yl-L-Lyse-D-Ala-D-Ala) - diphosphoundecaprenol.
C. I- STMILMAR LOCATION: Integral membrane protein (By similarity).
C. I- STMILMATTY: Belongs to the glycosyltransferase family 4. Mray

ROMPATION: First step of the lipid cycle reactions in the blosynthesis of the cell wall peptidoglycan (By similarity).

C. I. FUNCTION: First step of the lipid cycle reactions in the blosynthesis of the cell wall peptidoglycan (By similarity).

C. I. SUNGELDUAR LOCATIVITY: Indeparal membrane protein (By similarity).

C. I. SUNGELDUAR LOCATION: Integral membrane protein (By similarity).

C. I. SIMILARITY: Belongs to the glycosyltransferase family 4. Mrax

C. I. SUNGELDUAR LOCATION: Litesparal membrane family 4. Mrax

C. I. SUNGELDUAR LOCATION: Litesparal membrane family 4. Mrax

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 host specificities.";

Nature 417:459-463 (2002).

-!- FUNCTION: First step of the lipid cycle reactions in the biosynthesis of the cell wall peptidoglycan (By similarity).

-!- CARLYTIC ACTIVITY: UDPMurZAG(oyl-L-Ala-agamma-D-Glu-L-Lys-D-Ala-D-Glu-L-Lys-D-Ala-D-Glu-L-Lys-D-Ala-D-Ala) + diphosphoundecaprenol.

-!- PATHWAY: Peptidoglycan biosynthesis.

-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).

-!- SUBCELLULAR Belongs to the glycosyltransferase family 4. MraY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Submitted (DEC-2000) to the EMBL/GenBank/DDBJ databases.

-!-FUNCTION: First step of the lipid cycle reactions in the biosynthesis of the cell will peptidoglycan (By similarity).
-!-CATALYTIC ACTIVITY: UDPMARZAC(Oyl-L-Ad-gamma-D-Glu-L-Lyg-D-Ala-D-Ala) + undecaprenyl phosphate = UMP + Mur2Ac(oyl-L-Ala-gamma-D-Glu-L-Lyg-D-Ala-D-Ala-D-Ala-D-Ala-Gamma-D-Glu-L-Lyg-D-Ala-D-Ala-Gamma-D-Glu-L-Lyg-D-Ala-Gamma-D-Glu-L-Lyg-D-Ala-Gamma-D-Glu-L-Lyg-D-Ala-D-Ala-Gamma-D-Glu-L-Lyg-Boridoglycan biosynthesis.
-!-PATHWAY: Peptidoglycan biosynthesis
-!-SAUGELLUAR LOCATION: Integral membrane protein (By similarity).
-!-SIMILARITY: Belongs to the glycosyltransferase family 4. MraY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MILLIAEYLQQFYKGFGVFQYLTLRGILSVLTALSLSLWLGPWMIRTLQIPQIGQAVRND 60
biosynthesis of the cell wall peptidoglycan (By similarity).
--- CATALYITC ACTIVITY: UDPMLZA6(cyl-L-Ala-agamma-D-Glu-L-Lys-D-Ala-D-Ala) + undecaprenyl phosphate = UMP + MurZAc(cyl-L-Ala-gamma-D-Glu-L-Lys-D-Ala-D-Ala)-diphosphoundecaprenol.
--- PATHMARY: Peptidoglycan biosynthesis.
--- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
--- SIMILARITY: Belongs to the glycosyltransferase family 4. MraY

"Genome sequence of Vibrio parahaemolyticus: a pathogenic mechanism distinct from that of V. cholarae.";

Lancet 361:743-749(2003)

C -!- FUNCTION: First step of the lipid cycle reactions in the biosynthesis of the cell wall peptidoglycan (By similarity).

C -!- CATALYTIC ACTIVITY: UDPMur2Ac(oyl-L-Ala-gamma-D-Glu-L-Lys-D-Ala-D-Ala) -diphosphoundecaprenol.

Glu-L-Lys-D-Ala-D-Ala) -diphosphoundecaprenol.

C -!- PATHWAY: Peptidoglycan biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 GPKWHFSKAGTPTMGGSLILMTVTLSVLLWGDLRNRYVWLVLVVWLAFGAIGWYDDWIKL 120

Bacteriol., 185:1018-1026(2003).

J. Bacteriol., 185:1018-1026(2003).

J. FUNCTION: First step of the lipid cycle reactions in the biosynthesis of the cell wall peptidoglycan (By similarity).

J. CATALYTIC: UDPMATZAC(0y1-L-Ala-agamma-D-Glu-L-Lys-D-Ala-D-Ala) + undecaprenyl phosphoundecaprenol.

J. PATHWAY: Peptidoglycan biosynthesis.

J. SAHWAY: Peptidoglycan biosynthesis.

J. SUBCELULAR LOCATION: Integral membrane protein (By similarity).

J. SIMILARITY: Belongs to the glycosyltransferase family 4. Mray
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Transferase; Transmembrane;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Comparative" analyses of the complete genome sequences of Pierce's disease and citrus variegated chlorosis strains of Xylella fastidiosa.";

Nature 406 477-483 (2000).

-!- FUNCTION: First step of the lipid cycle reactions in the biosynchesis of the cell wall peptidoglycan (By similarity).

-!- CATALYTIC ACTIVITY: UDPMur2Ac (oyl-L-Ala-gamma-D-Glu-L-Lys-D-Ala-D-Glu-L-Lys-D-Ala-D-Glu-L-Lys-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-Ala-D-A
                                                                                          -1- PATHWAY: Peptidoglycan biosynthesis.
-1- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
-1- SIMILARITY: Belongs to the glycosyltransferase family 4. MraY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   'DNA sequence of both chromosomes of the cholera pathogen Vibrio

Choy H.E.,
"Complete genome sequence of Vibrio vulnificus CMCP6.";
Submitted (DEC-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: First step of the lipid cycle reactions in the biosynthesis of the cell wall peptidoglycan (By similarity).
-!- CATALYTIC ACTIVITY: UDPMLZAG (Oyl-L-Ala-gamma-D-Glu-L-Lyg-D-Ala-D-Ala) + undecaprenyl phosphate = UMP + Mur2Ac(oyl-L-Ala-gamma-D-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 GPESHFSKRGTPTMGGVMILAAITITVLLWADLTNPYVWAVLAVLLGYGAVGFVDDYRKV

Glu-L-Lys-D-Ala-D-Ala)-diphosphoundecaprenol.
-!- PATHWAY: Peptidoglycan biosynthesis.
-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
-!- SIMILARITY: Belongs to the glycosyltransferase family 4. MraY subfamily.
                                                                                                                                                                                                                                                                                                           Transferase; Transmembrane;

"Complete genomic sequence of Pasteurella multocida Pm70.";
Proc. Natl. Acad. Scil. U.S.A. 9813460-3465(2001).
-!- FUNCTION: First step of the lipid cycle reactions in the biosynthesis of the cell wall peptidoglycan (By similarity).
-!- CATALYTIC ACTIVITY: UDPMArZAc(cyl-L-Ala-gamma-D-Glu-L-Lys-D-Ala-D-Ala) + undecaprenyl phosphate = UMP + MurZAc(cyl-L-Ala-gamma-D-Glu-L-Lys-D-Ala)-diphosphoundecaprenol.
-!- PATHWAY: Peptidoglycan biosynthesis.
-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
-!- SUBCELLULAR Belongs to the glycosyltransferase family 4. MraX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ||: || : || || | | | : || : || TRKNTDGLIARWKYFWLSVIALVAARGMYAIGKDTDATRLVVPFFKEIMPQLGLFYIILT

A; Corss-references: GB:AL590842; PIDN:CAC89408.1; PID:g15978644; GSPDB:GN00175
C; Generics: A; Gene: mray
C; Superfamily: phospho-N-acetylmuramoyl-pentapeptide-transferase
C; Keywords: transferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 8
AB0518
phospho-N-acetylmuramoyl-pentapeptide- transferase [imported] - Salmonella enterica subs
phospho-N-acetylmuramoyl-pentapeptide- transferase [imported] - Salmonella enterica subs
c;Species: Salmonella enterica subsp. enterica serovar Typhi
A;Note: this species has also been called Salmonella typhi
c;Date: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 18-Nov-2002
C;Accession: AB0518
